$3 + \square = 20$	$10 - \square = 3$	$8 + 9 =$
$7 + 8 =$	$\square - 7 = 2$	$15 + 4 =$
$\square + 12 = 20$	$\square - 5 = 5$	$6 - 4 =$

Strategies for solving these problems:

- Use the addition and subtraction facts you already know.
- Split the teen number and add the ones. For example $15 + \underline{\quad} = 20$ can be solved by adding splitting the 15 into 10 and 5 and then adding $5 + 5$ to make 10.
- Make the first number up to 10 and then add on another 10 to make 20. For example $6 + \underline{\quad} = 20$ can be solved by knowing that $6 + 4 = 10$ and another 10 equals 20, so the answer is 4.
